Notes:

Learners will click on the grey icons to go through each course.

There will be screens behind each button (don't know how to do that yet but...)

The Mequon Nature Preserve

Frog Identification and Data Collection Training Course

The purpose of this online course is to provide training for volunteers of the Mequon Nature Preserve to help naturalists gather data on the frog species that are present in the preserve. In order to do the data collection properly, volunteers need to be able to identify frogs by both their call and appearance as well as understand the protocol required for the data collection. There are four lessons below, click on each icon to begin the lesson

Click on the icons below to begin each lesson. They can be done in any order. The next function will take you through the modules from left to right.

Frog
Identification

Protocol

Data Collection

Other Wildlife ID

Audio: It would be great to add an optional audio reader to all the text. Don't know how to do that though.

Notes:

NEXT →

BACK →

When users click on the underlined frog name, they will hear the audio but nothing will change on this screen.

When they click on the Info buttons, it will take them to a screen with multiple pictures of the frog and some more info. about that frog species.

The following slides will be the info for each frog that will be linked to the buttons

Frog Identification Lesson

Click on the name of each frog to hear its unique call. The "Info." button provides added information and pictures of that species if you are interested. When you can identify the frog species by its call and appearance you are ready to start the "Check Your Knowledge" section, so press the Next button.

Audio: Audio MP3 files are also from the Wisconsin DNR. There is a lot on this screen but the volunteers need quick access to the audio when they are in the field, so they need it all on one page.

This is one of the information screens that they can optionally visit. I am putting them after the the three primary screens.

They will all have the same format AND they will have the audio option if they want to listen to the audio while reading about the frog.

Frog Identification Lesson - More Information by Species

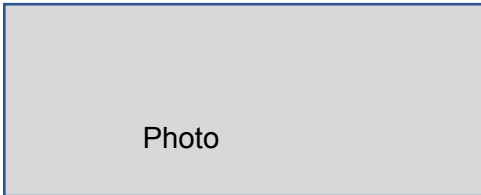

The Wood Frog - *Lithobates sylvatica*

[Listen to the Frog Call](#)

Photo

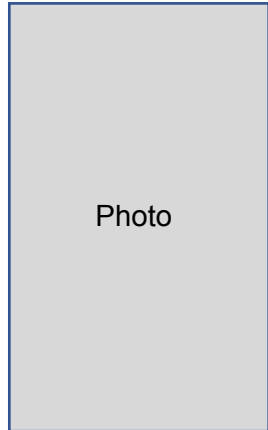

Information about this species including:
Size, specific unique markings, mating behavior, geographic region, a fun fact or two about this little guy.
